PROFESSIONAL SUMMARY

Senior Java & Angular Full Stack Developer with 6 years at WICO Technology (part-time during studies, full-time since 2025), delivering production systems end to end. Expertise in Java 8/17/21, Spring Boot, Spring Security, JPA/Hibernate, Angular, TypeScript, REST APIs and PostgreSQL. Client-facing technical owner experienced in SOLID design, performance tuning, Agile delivery, code review and mentoring across an ERP serving 1,000+ users and 10+ business modules.

TECHNICAL SKILLS

Backend: Java 8/17/21, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, JWT, RBAC, PostgreSQL, SQL
Frontend: Angular 17, TypeScript, RxJS, Reactive Forms, reusable components, Route Guards, HTTP Interceptors, HTML5, CSS3
Architecture & Quality: Microservices, modular architecture, SOLID, design patterns, API design, JUnit, Mockito, unit/integration testing, performance tuning, code review
Build & DevOps: Maven, Gradle, Lombok, Flyway, Liquibase, OpenAPI/Swagger, Postman, GitLab CI/CD, Docker, Kubernetes, Jenkins, SonarQube, Linux, Git
Delivery & Leadership: Agile/Scrum, requirements analysis, backlog refinement, estimation, mentoring, client communication, production support

PROFESSIONAL EXPERIENCE

WICO Technology – SoluBat
Senior Java & Angular Full Stack Developer
Part-time during university (2020–2025); full-time after graduation.

2020 – Present
Tunis, Tunisia

- Own end-to-end delivery of a production building-management ERP serving **1,000+ users** across **10+ business modules**, including inventory, project costing, quotations, HR and maintenance workflows.
- Design Spring Boot/Spring MVC services and REST APIs with Spring Data JPA/Hibernate, DTOs, validation, global exception handling and OpenAPI; model transactional PostgreSQL workflows and clear service boundaries.
- Design and evolve modular services and microservices using SOLID principles and common design patterns; define REST contracts and integration boundaries across business domains.
- Implement authentication and authorization with Spring Security, JWT and RBAC; manage database migrations with Flyway/Liquibase and Maven/Gradle-based Java builds.
- Build Angular 17/TypeScript frontends with RxJS, Reactive Forms, reusable components, Route Guards and HTTP Interceptors, integrating complex workflows with backend APIs.
- Improve performance by tracing bottlenecks across frontend, backend and persistence layers: cut load times of slow ERP screens and reports by **~40%** through SQL query and index tuning, and reduced backend calls per screen by **~30%** through request batching and caching.
- Build JUnit/Mockito unit and integration tests, raising coverage on core modules to **~70%**; validate APIs with Postman and Swagger/OpenAPI; enforce quality through SonarQube, code review and GitLab CI/CD pipelines.
- Support Docker/Kubernetes deployments on Linux and investigate production defects using logs, reproducible test cases and root-cause analysis, reducing repeat production incidents by **~25%** through root-cause fixes.
- Work directly with the client on requirements, edge cases, estimation and prioritization; review code and mentor **4 junior developers** through 2-week Agile sprints, shipping a release every sprint.

PERSONAL PRODUCT

Veinpal
Founder (personal project, built alongside full-time work)

Jan 2026 – Present

Built and launched a five-product software platform spanning web and desktop products, owning architecture, implementation, release management and production delivery end to end. Designed backend services for authentication, validation and business logic using PostgreSQL, Redis and Prisma with S3/MinIO storage; owned React/Next.js frontends, automated testing and CI/CD-driven releases.

EDUCATION & LANGUAGES

ESPRIT – Software Engineering Degree (2020–2025), Tunisia
Languages: English – B2+ | French – B2+ | Arabic – Native
